

Thought for 6s >

Yes. I'd build **two flow charts** for BankApp:

1. **User flow** — how a customer moves through the app.
2. **System flow** — how React, Spring Boot, PostgreSQL, and AWS work together.

You can paste these into your `README.md` later using Mermaid.

1. BankApp User Flow

Mermaid

2. BankApp System Flow

Your frontend template is a React/CoreUI single-page app using routes, views, reusable components, and a Vite dev server on port `3000`. The backend is Spring Boot on port

`8080`, using JPA/Hibernate with PostgreSQL.

ARCHITECTURE

DEVELOPMENT

package

Mermaid

</>

▶

⌵

3. Deployment Flow

For the cloud version, I would keep it simple:

Mermaid

</>

▶

⌵

4. Core Feature Flow

This is the most important one for building the app:

Mermaid

[Mermaid](#)

That is the build order I would follow.

Where this belongs in your repo

Create:

```
BankApp/
├── docs/
│   └── app-flow.md
```

Then paste these diagrams there.

Later, your `README.md` can link to it:

↗ Markdown

```
See the full application flow in [docs/app-flow.md](docs/app-flow.md).
```

This gives your project a more professional feel and helps you explain the architecture during interviews.
